## MEMORANDUM

> TO:

School Board
FROM：
Scott S．Brabrand，Ed．D．
SUBJECT：Capital Improvement Program－FY 2019 －FY 2023

I am pleased to submit to you the proposed Capital Improvement Program（CIP）for the Fiscal Years（FY） 2019－23．

Since School Year（SY）2008－09，student membership in Fairfax County Public Schools（FCPS）has grown by an average of 2,487 students each year for a total membership growth of more than 24，000 students．This year，between SY 2016－17 to SY 2017－18，the total September $30^{\text {th }}$ membership grew by 1,006 students for a total membership of 189,029 students．This is one of the smallest membership increases Fairfax County Public Schools has experienced in more than nine years．This year＇s contracted growth was due to a decrease in entering kindergarten cohorts and a decline in net migration．These indicators have led to a five－year forecast that continues to project a moderate overall membership growth．The five－year CIP horizon forecasts approximately 190，200 students by SY 2022－23．

Demographic growth and shifts，especially increasing Hispanic student populations，comprised a large part of the growth in membership this year．FCPS may be nearing or have passed a relative membership peak in the early elementary grades and overall elementary school membership is projected to slightly decline．Middle school memberships are projected to show a small decline．Due to larger cohorts that have progressed from elementary and middle schools，high school memberships are projected to experience growth．The five－year membership projections show moderated growth in total membership．

These new trends of growth are inconsistent across the county and continue to present a facilities capacity challenge．The school system struggles to provide sufficient capacity in our schools．Despite the planned additional capacity intended to address projected needs，uneven membership growth throughout the county will necessitate the continuation of small－and large－scale boundary adjustments to take advantage of available capacity whenever it is practicable to do so．

The capital funding stream shown in the FY 2019－23 CIP reflects $\$ 315$ million approved by county voters in the 2017 School Bond Referendum．This funding will allow the planning of one new elementary school， construction of one new elementary school，planning of three high school additions，the relocation of one modular addition，renovation of five elementary schools，two middle schools，and one high school，along with renovation planning of five elementary schools，one middle school，and one high school．

Funding for capital improvement projects is currently limited by a $\$ 155$ million yearly cap on school bond sales．Providing the additional new schools and capacity enhancements required to accommodate membership growth will cause delays in the schedule of many future renovation projects．The School Board and Board of Supervisors has formed a committee to study ways to solve the long renovation cycle of our schools due to the limited capital funding available．The Infrastructure Finance Committee recognized that the bond items which pertain to replacement of key infrastructure such as roofs，parking lots，and mechanical systems was delaying the implementation of school renovations．Beginning in SY 2015－16，the Board of Supervisors began transferring an additional $\$ 13.1$ million to FCPS to offset the infrastructure replacement，benefiting renovation projects in the near future．

School Board
Page 2
December 14, 2017

Project costs have also been updated in this document to reflect those currently being experienced. As a result, the FY 2019-23 five-year capital requirement totals approximately $\$ 814$ million or roughly $\$ 163$ million per year. The five-year requirement represents roughly $37 \%$ of the $\$ 2.2$ billion total CIP cost for FY 2019-28. Funds approved in the 2017 School Bond Referendum and previous referenda will address approximately $\$ 472$ million of the five-year requirement leaving a balance of $\$ 342$ million unfunded. We anticipate the next bond referendum in the fall of 2019.

Capital improvement requirements for the ensuing five-year period (FY 2024-28) have been included to conform to Fairfax County's CIP format. Approximately $\$ 1.3$ billion in capital project requirements are included within this out-year time frame.

We continue to enhance the CIP to assist readers in understanding our long term goals as we continue to contend with changing demographics and limited capital funding. This version of the CIP includes potential capacity and capital solutions to schools which are currently or projected to be over-capacity. The intent of the solutions was to provide relief through surplus capacity at adjacent facilities as well as taking advantage of projects which have already been identified in previous versions of the CIP. We have also included maps of our surplus properties and former schools which may ultimately be part of capital solutions in the future.

## SUMMARY HIGHLIGHTS

The FY 2019-23 Capital Improvement Program (CIP) updates and builds upon the previously approved program of capital expenditures. The CIP project schedule assumes continuation of an annual expenditure limit of $\$ 155$ million imposed by the Fairfax County Board of Supervisors. School construction projects approved in the November 2017 School Bond Referendum are included in this CIP as funded projects.

The following summarizes the proposed FY 2019-23 CIP and the important assumptions upon which it is based:

Although the overall population of Fairfax County is projected to continue to grow in the future, the school system is facing new indicators that differ from the past. For CIP purposes, between SY 2008-09 and SY 2013-14, student membership in Fairfax County Public Schools (FCPS) grew by an average of 3,000 students each year. Yet membership in SY 2014-15 only grew by 2,017 students, SY 2015-16 saw a membership growth of 240 students, and SY 2016-17 saw a membership growth of 1,368 students. This year, FCPS experienced a growth of 1,098 students. The recent decline in growth is caused by a variety of factors such as smaller entering kindergarten cohorts and a decline in net migration. Net migration is the total number of students gained or withdrawn from the school system. Future student membership growth is projected to be slowing in the years ahead. Over the five-year CIP horizon, membership is projected to increase by 1,871 students by SY 2022-23.

Additionally, while new housing had been one of the primary sources of growth within FCPS during the 1980s and 1990s, newly completed housing declined during the economic downturn starting in 2008. As the county approaches build-out, new housing is forecast to rise in units, but its composition is likely to change. Forecasts of housing in Fairfax County and the City of Fairfax include larger numbers and proportions of mid- and high-rise residential developments, which have typically drawn fewer families with school-aged children. Anticipation and completion of the Silver Line Metro has already spurred higher density residential growth along that corridor. This new residential growth, along with potential changes in families residing within existing residential areas adjacent to that corridor, may, in part, result in an increase in students within FCPS.

Despite the planned additional capacity intended to address current and projected needs, uneven membership growth throughout the county will necessitate the continuation of boundary adjustments to take advantage of available capacity whenever it is practicable to do so.

The CIP proposes construction of a new high school in the western area of the county to provide capacity relief for high schools in the Centreville, Chantilly, Herndon, Oakton, South Lakes, and Westfield areas. It also proposes new school construction of three elementary schools: one in the northwest area of the county to address current overcrowding in the McNair Elementary school area; one to relieve overcrowding in the Fairfax/Oakton area; and one near the new Silver Line Metro. Capacity enhancement additions are needed at West Potomac High School, Justice High School, and Madison High School to accommodate forecasted capacity needs. The relocation of three modular additions is also proposed to provide additional capacity relief to schools in need. Renovations of 21 named elementary schools and 12 unnamed elementary schools, four named middle schools and one unnamed middle school, and five named high schools are also included in the CIP. Lastly, the CIP proposes expenditures for the acquisition of a future school site.

The school renovation program is based upon several criteria, compiled and referred to as the renovation queue. The current renovation queue was prepared in 2008 and approved by the School Board in January of 2009 and established the order in which schools would be renovated, as evaluated and ranked by an independent architectural and engineering firm. Due to the continuing increase in student membership, it should be noted that the construction of new capacity, whether it is a new school or addition, could adversely impact the timing of some renovation projects. To the extent known, any such delays are shown in this year's CIP. Although construction costs are rising, the increases will be offset by additional funding approved by the Board of Supervisors to cover infrastructure replacement costs.

This document provides advance notice to school communities about capital projects and/or possible boundary adjustment options over the next five years. The membership capacity comparisons include maps reflecting capacity utilizations and recommendations for student accommodations. An alphabetical listing of all schools and a glossary of commonly used terms have been included in the CIP to show important facility and feeder school information.

Based on feedback received from the Facilities Planning Advisory Council (FPAC) and questions from the community, this year's CIP builds on changes made last year in the organization and presentation of information. New tables, maps, and graphs have been added to further explain information that is relevant to capital planning. The purpose of the enhancements is to help readers gain a comprehensive understanding about the various factors which inform decision-making. Each year, the Capital Construction Cash Flow is updated, along with recommended options to maximize capacity for student growth and program changes.

Potential boundary adjustment options are included in the CIP for future consideration only. Any option chosen for potential implementation will be discussed and decided through a transparent process that engages the community, in accordance with School Board Policies and Regulations.

For more information about facility needs, visit our web page at www.fcps.edu/about-fcps/facilities-planning-future/capital-improvement-program.

## IMPORTANT NOTE

The FCPS FY 2019-23 Capital Improvement Plan (CIP) is a planning and fiscal management tool used to coordinate the location, timing, and financing of projects over a five-year period. The CIP includes the proposed capital improvement projects, a year-by-year schedule of anticipated spending, and actual and estimated costs. The CIP is a working document which is updated annually to reflect changing conditions within our schools and communities. Additionally, it offers a broader planning schedule in order to focus staff efforts and community conversations. FCPS faces significant capacity challenges which will require strategic decisions about boundaries, capacity enhancements, new schools, and programmatic changes. Parallel work is also underway to design a new, more systematic approach to future decision-making processes that impact facilities planning.

# OVERVIEW 

## CIP OVERVIEW

The Capital Improvement Program (CIP) compiles and evaluates information to identify capital needs for facility renovations and new construction. Updated annually, it includes current student membership data and capital facilities data. The CIP also reflects Fairfax County Public Schools' School Board Policies and Regulations, Guiding Principles, funding sources, and many other components associated with the capital program.

Various funding sources are used during the life cycle of school facilities and include general obligation bond funding, FCPS operating funds, and infrastructure management funds. Bond funding is used for capital projects. This includes funds for building new schools, renovations, additions (including brick and mortar additions and modular additions), and for site acquisition. The projects included in this CIP are projects funded by the general obligation bond. The FCPS operating funds provide $\$ 2.4$ million towards capacity enhancements such as interior modifications and temporary classrooms to accommodate membership growth and programs. In addition, approximately $\$ 10$ million is allocated annually for routine and major maintenance of our schools, centers, and administrative facilities. Lastly, the Fairfax County Board of Supervisors contributes $\$ 13.1$ million for infrastructure management which includes repairs, replacement, and upgrades in school system facilities such as HVAC, ADA, security, roof replacement, athletic infrastructure, life safety systems, and asphalt paving.

## THE PRESENT ENVIRONMENT

FCPS continues its commitment and dedication to providing high quality education while managing competing needs for its limited funding for operating and capital expenses. The increase in operational expenses caused by membership growth, changing demographics, competitive salary requirements, instructional program enhancements, special services' requirements, and transportation costs, place an additional burden on revenues received, even with moderately increased local funding. The need to increase capacity results in increased capital funding needs that currently outpace the county debt cap, which is necessary to maintain Fairfax County's exceptional bond ratings. In short, funding is insufficient for new construction, renovations, and maintenance. Furthermore, fiscal constraints on operations and maintenance budgets and fixed capital investment funds hinder FCPS' ability to effectively maintain its facility resources within the recommended lifecycles. Deferred maintenance has a snowballing effect that is difficult to overcome.

Inadequate maintenance results in the unsatisfactory condition of many facilities. The challenges are many and growing, for example:

- Membership has continued to increase in both the general education and the special program areas, leading to a need for additional school capacity.
- The number of students requiring special services (e.g., Special Education, English for Speakers of Other Languages) and the range of required services due to demographic changes has grown. To accommodate the needs of these children, extra teaching space is required-space requirements that were not anticipated when many schools were initially constructed.
- Some programs decrease design capacity. From this, FCPS calculates a program capacity for each school based on its unique program accommodation needs, such as those for students with autism or for advanced academics programs.
- Economic conditions in the early 1990s and the late 2000s have resulted in extraordinary-and potentially unsustainable—cuts to the budget for facility repair and maintenance functions. Cuts made decades ago were never restored and have been compounded by more recent reductions. In 2012, Facility Engineering Associates evaluated the Office of Facility Management and detailed a critical shortfall of staff in the office as a result of repeated budget cuts. While increasing staff has been a priority of the office, continued budget shortfalls have deferred this effort.
- FCPS is limited in its general obligation bonds used for capital projects by $\$ 155$ million per year based on a mutual agreement between the Fairfax County Board of Supervisors (BOS) and the Fairfax County School Board. This amount is insufficient based on the size of the capital infrastructure to create space for increased student population and to renovate or replace buildings and equipment reaching the end of useable life cycles. This problem is exacerbated by the hundreds of millions of dollars in the facility renovation backlogs caused by these limitations.
- Maintenance of facilities that focuses resources on reactive, rather than proactive or preventive maintenance, leads to overall degradation of facilities.
- Insufficient dedicated, secure, and carefully placed school bus parking sites and lack of depots.
- The county is becoming more urbanized, limiting the availability of large plots for new schools. Traditional school designs are no longer practical in many situations.

## CHALLENGES

FCPS is faced with a number of challenges that directly impact its ability to accommodate students in its facilities. In particular, the continued urbanization and changing demographics has led to an imbalance of available space and needs of the student population. These changes, coupled with funding limitations, have led to:

- The operation of many individual schools at far greater than 100 percent of program capacity with other schools operating below 85 percent of program capacity.
- The use of more than 800 temporary classroom spaces located in trailers to accommodate capacity needs.
- The undertaking of multiple school boundary studies, a process which attempts to address utilization disparities.
- Cohorts of some elementary and/or middle schools who find themselves in "split feeders" attending two or three different middle and/or high schools.
- An ever-increasing renovation queue, with more schools exceeding the School Board 20- to 25-year renovation cycle.
- A need to plan for, design, and operate urban schools, and to co-locate schools with other uses, such as parks, libraries, or within urban residential/commercial buildings.

FCPS facilities are designed to support the educational programs for our students, and are funded by the bond funding, FCPS operating funds, and infrastructure management funds. The CIP is designed to help the School Board focus on critical facility issues, with the goal of ensuring that all students have a high quality facility that enables and enhances their education. Addressing these challenges will require trade-offs. Increasing memberships and the locations of educational programs drive the need for additional capacity. FCPS' aging facility infrastructure requires maintenance, renovation, and eventual replacement. Budgetary and financial constraints limit what can be done. Therefore, FCPS must continue to explore new and creative ways of expanding the use of its facilities while seeking additional funding.

## THE CAPITAL IMPROVEMENT PROGRAM

Each year, FCPS develops a five-year planning document known as the Capital Improvement Program (CIP) to address future facility needs. The CIP lists all facility renovations and new construction projects managed by the school system's Office of Design and Construction. Capital improvements are funded through the sale of general obligation bonds for schools, which must be approved by a majority of voters. The CIP list includes projects that are funded from prior bond sales as well as projects that are unfunded. The unfunded projects reflect planning for identified needs, which will be included in future bond referenda. The actual timing for capital project starts and completions is largely dependent on the Capital Construction Cash Flow and debt service, which are governed by the Fairfax County Board of Supervisors.

The CIP guides the development of construction funds to ensure:

- Efficient and effective use of FCPS-owned facilities
- Classroom capacity and infrastructure meet instructional program and community needs
- Facility needs are met equitably across the county

As a planning document, the CIP is not static and is updated annually. Every year, FCPS evaluates the capacity and effective building utilization of each school. The CIP adjusts to shifts in student population and the needs of the community as they become more defined and as projects move closer to implementation.

A key element of the CIP is planning for the Capital Construction Cash Flow to fund these projects while working within Fairfax County's debt service and capital spending limitations. The CIP Capital Construction Cash Flow has been predicated on 4 percent to 6 percent cost increases for future fiscal years. Increases in construction market pricing, coupled with CIP initiatives providing additional capacity to accommodate membership increases, could result in some timing delays of school renovation starts. As membership growth drives the demand for more capacity, the Capital Construction Cash Flow may increasingly shift away from renovations, potentially increasing the time before a school community may undergo school renewal.

## ESSENTIAL OPERATIONAL PLANNING DOCUMENTS

The following key documents articulate FCPS' mission and vision. These documents are interrelated; together, they provide the blueprint for planning the business operations that guide the actions of all departments.

## Portrait of a Graduate (POG)

Portrait of a Graduate encompasses all that we want our students to be. The FCPS graduate will engage in the lifelong pursuit of academic knowledge and interdisciplinary learning by being a communicator, a collaborator, an ethical and global citizen, a creative and critical thinker, and a goal-directed and resilient individual.

## FCPS Strategic Plan: Ignite

The Strategic Plan represents the cooperative work of the School Board and Leadership Team to create a long-term strategic plan for Fairfax County Public Schools. The School Board approved four strategic goals: student success, caring culture, premier work force, and resource stewardship.

## Strategic Governance Manual (SGM)

The Strategic Governance Manual outlines a governing process that allows the School Board to exercise its responsibilities in a manner that assures that the staff, under the authority of the Superintendent, has the freedom and authority to do its work without interference but also has full accountability for the results of its decisions.

## Fairfax County Comprehensive Plan (FCCP)

Fairfax County's Comprehensive Plan guides the County government in decision-making about the built and natural environment. It is a dynamic document which is used by the Fairfax County Board of Supervisors, the Planning Commission, county staff, and the public to guide land use, transportation, and public facility decision making. Based on the information it provides, the CIP considers the effect of development on the school system.

## Capital Improvement Program (CIP)

The CIP is used as a basis for determining the timing and size of proposed bond referenda to be placed before the voters of Fairfax County. The primary source of funding for school construction projects is the sale of bonds authorized by the voters in these referenda. It is updated annually and contains a five-year forecast.

## Budget

The budget process begins in January with the Proposed Budget, which details projected revenue and expenditures. After the Proposed Budget is released, public hearings are held and the School Board has the opportunity to make changes. That amended budget, called the Advertised Budget, is submitted to Fairfax County for incorporation into the County's Advertised Budget. Once revenue for the coming year is known, including the direct funding from the County that comprises over 71 percent of FCPS funding, the School Board works with employees and citizens to finalize the budget. This finalized budget is passed in May as the Approved Budget, and details the revenue and expenditures for the next fiscal year.

## $\square$ (a)

## REGULATION FRAMEWORK

The following guiding principles have been proposed to frame the decisions within the Capital Improvement Program (CIP). These principles will be revisited with each new CIP to ensure that they are consistent with FCPS School Board Policies and Regulations, along with the needs of the community.

It is important to maintain strong, connected school communities and community/neighborhood schools that are safe and conducive to learning for all students. The following statements are meant to provide a context for decisions impacting the division's capital needs so that limited capital resources and supporting quality educational spaces are maximized. Each school and each school community has its own unique needs, thus these statements may not be applicable or appropriate in all circumstances.

## GUIDING PRINCIPLES

- Unique program offerings should be made available in all division pyramids in order to keep students within their zoned pyramid throughout their K-12 experience, where conditions are conducive to program needs.
- Alleviate attendance islands where possible.
- In order to address overcrowding in some schools, utilize existing and/or projected surplus capacity in nearby schools by adjusting boundaries.
- When renovating small schools, add additional capacity to stated division standards.
- Repurpose existing inventory of school facilities not currently being used as schools to address capacity challenges.
- In order to maximize limited capital monies, only construct new schools where surplus capacity or existing school inventory are not available.
- Community engagement and transparency are essential parts of the process. With any major capital improvement project, the community impacted by the project will be actively engaged as per FCPS School Board Policies and Regulations.
- Providing a diverse student population in each school is important in enhancing learning opportunities.
- FCPS is committed to continue to take innovative and cost-effective steps to help our country achieve climate stabilization. That includes prioritization of systems and practices that maximize energy efficiency and provide for the cost effective transition to clean and renewable alternatives to fossil fuels.

## POLICIES AND REGULATIONS

Fairfax County Public Schools maintains policies, regulations, and notices that guide expectations related to the Capital Improvement Program. Policies are officially adopted School Board positions and specifications. Regulations are procedures and rules for the implementation of policy positions and guidelines that are approved by the division superintendent or designee. Finally, notices contain information about yearly or one-time occurrences of short duration. Notices are approved by the division superintendent or designee, and are reissued, not revised. For more information about FCPS policies and regulations, visit https://www.fcps.edu/about-fcps/policies-regulations-and-notices.

Policies and Regulations

| NUMBER | SERIES | CATEGORY AND TITLE | PURPOSE |
| :---: | :---: | :---: | :---: |
| Policy 8110 | Facilities and Transportation Services | Facilities Planning <br> Five-Year Capital Improvement Program Planning | To establish procedures for five-year capital improvement program planning. |

## $\square(\square)$

## FUNDING SOURCES

In Virginia, school boards do not have taxing authority and are fiscally dependent on the local government. Because bonds are a future obligation for taxpayers, Virginia law requires that voters approve long-term debt incurred by bonds through a referendum. Most city and county governments use bonds-a form of long-term borrowing-to finance public facilities and infrastructure. Traditionally, Fairfax County has used the sale of municipal bonds to fund these large expenditures. This enables the costs of major capital improvements to be spread over the many years that the facilities are used. This also avoids an excessive cost burden to current taxpayers and shares the cost of these long-term investments with future taxpayers who will also use the facilities. Voter approval authorizes the Fairfax County Board of Supervisors (BOS) to sell bonds, when needed, to generate the funds for a range of public facilities like schools.

## BONDS

## FCPS School Bond Process

Of the nation's more than 3,000 counties, Fairfax County is among the few that have the highest credit rating possible for a local government from all three rating agencies. High bond ratings allow the county to sell the bonds at exceptionally low interest rates, thereby saving considerably on the cost of the project. To ensure that the county's bond ratings are not jeopardized, the Fairfax County BOS adheres to financial management principles that set limits on the annual cost of the county's debt service and net long-term debt.

While the practice of municipal bond sales has provided a reliable resource for funding capital improvement projects, the bond spending cap for FCPS of $\$ 155$ million per year has limited funding availability, thus limiting FCPS' ability to renovate and add capacity to the facilities.

Every two years in November, school capital facility projects are part of a school bond referendum, which is added to the general election ballot. Actual start and completion dates for CIP projects depend on the Capital Construction Cash Flow and debt service limitations established by the Fairfax County BOS. The timeline for capital projects can range from 5-7 years or more in order to go from bond approval to completion as a result of the spending limitation of $\$ 155$ million each year.

## Bonds for Capital Improvements Projects

- New construction
- Capacity enhancement (additions to existing schools and other modifications)
- Renovation program
- Special program facilities
- Site acquisition

## PROFFERS FROM NEW HOUSING

Proffers are a developer's commitment to offset the impacts of new residential development on surrounding schools, though are limited by proffer language and state legislation. They are an important funding resource used for school capital improvement, but due to the unpredictable nature of development, when and which proffers will be received is unknown.

FCPS communicates to School Board members regarding proffer funding through:

- Development review process-school impact analysis memos including recommended proffer contributions.
- Superintendent's update—annual notice of approved development with estimated proffer contributions.
- Notification of proffer funding and disbursement-opportunity to comment prior to disbursement of funds.

Additionally, FCPS provides annual reports about Fairfax County proffers and its expenditures to the Commonwealth of Virginia as part of Fairfax County's report to the Commission on Local Governments (CLG).

## Proffer Contribution Regulations and Legislation

In January 2003, the Fairfax County BOS approved a methodology (the Public Facilities Criterion - School Impact Methodology) to determine the impact of additional students generated by a new development as part of The Infill and Residential Development Study. This methodology formula is based upon current new construction costs, countywide student yield ratios, and current level of service, all which are adjusted by FCPS and reviewed by the Fairfax County BOS annually.

Since that time, the development review process for residential rezoning applications has included an assessment of the impact of new residential development on existing public school facilities and typically includes a recommended monetary proffer contribution to mitigate such impacts. Considering that the suggested per-student contribution changes annually and the actual residential development occupancy may not occur for several years, FCPS recommends an escalation clause be included to allow for the proffer to be based on the suggested per-student contribution in effect at the time of development. The escalation clause is requested given that development review for residential rezoning applications are being submitted now, but actual construction and occupancy may not occur for several years.

Prior to 2016, proffer legislation generally allowed for reasonable proffers for any purpose regardless of their relatability to the impacts of the development application. However, in 2016, new legislation required that all proffers for new residential development to address an impact "specifically attributable" to the development. Additionally, proffers must address "a need, or an identifiable portion of a need, for one or more public facility improvements in excess of existing public facility capacity" due to the impact of the development, and must provide "a direct and material benefit from a proffer made with respect to any such public facility improvements" to the proposed residential development. The county has identified areas that are exempted from the new proffer legislation, which meet the following criteria:

- An approved small area comprehensive plan in which the delineated area is designated as a revitalization area, encompasses mass transit as defined in §33.2-100, includes mixed use development, and allows a density of at least 3.0 floor area ratio in a portion thereof;
- An approved small area comprehensive plan that encompasses an existing or planned Metrorail station, or is adjacent to a Metrorail station located in a neighboring locality, and allows additional density within the vicinity of such existing or planned station; or
- An approved service district created pursuant to §15.2-2400 that encompasses an existing or planned Metrorail station.

The residing students of Eagle View ES, Lake Anne ES, and Terraset ES are all completely within areas exempted from the new proffer legislation; therefore, these schools will be generally unaffected by the new proffer legislation. The rest of the schools have residing students outside the exempted areas and may see their potential source of proffer funding reduced due to the restrictions of the new proffer legislation; however, some schools may be affected more than others.

## TIMELINES AND PROCESSES

The five-year projections used in this CIP have been modified to include elements of an improved projection methodology that is currently being developed by FCPS. This methodology blends two concepts. The first concept advances student cohorts school-by-school in relationship to historical ratios of student progression from each school. The second concept considers where students reside as related to the school boundary where they would be assigned as compared with the school where they attend.

## CIP PROCESS AND CYCLE

## CAPITAL PROGRAM RECOMMENDATIONS

## Background

FCPS uses the following steps each year to aid in identifying future student accommodation needs and recommending the best ways to address these needs. Given the limitations in the current budget and possibly future years' budgets, along with the urgency to address significant and continuing capacity deficits at schools throughout the county, the focus of capital spending is directed to capacity enhancement for schools that are likely to experience continued pressures from high student membership.

STEP 1: In developing membership projections, recent and historical membership patterns at each school and systemwide are considered. A few examples of these patterns are births, local and regional economic conditions, and housing. The Office of Facilities Planning Services develops general education membership projections in October for the next five years and the following March for the upcoming school year. These projections are combined with those from other departments to create overall school system projections. These projections forecast the future demographic trends and needs for the CIP. At the same time, each September, school facility floor plans are analyzed to determine the current capacity utilization of each school facility as it accommodates program needs. School facility capacity surplus and deficit values are established each year.

STEP 2: Projected membership and capacities are compared. Capacity deficits and surpluses are identified.
STEP 3: Recommended solutions to the capacity imbalances are developed and evaluated for both shortterm and long-term accommodation needs.

## Introduction

Using the student membership projections, FCPS identifies capacity deficits that cannot otherwise be addressed through school boundary changes, program relocations, temporary facilities, or other interior building modifications designed to recapture underutilized or unused capacity. The CIP project list and supporting materials comprise a "statement of need" to address these issues.

These needs are met through five types of projects listed below. The annual expenditures for these needs are shown on the Proposed Capital Improvement Program Summary page and Capital Construction Cash Flow sheets. Additionally, information is provided to conform to the county's guidance that 10 years of Capital Construction Cash Flow and capital requirements be identified. It is noted that FCPS updates these documents each year.

Project timelines are constrained to reflect the county's bond spending cap of $\$ 155$ million per year, based on the most recently approved two-year bond referendum. Project costs are updated each year to reflect recent rates of inflation in construction costs.

## Projects

There are five types of CIP projects.

## 1. NEW SCHOOL CONSTRUCTION

New school construction projects are considered when significant capacity deficits are likely to persist over time. Although this is the most costly method of accommodating student growth, it is an important option when capacity needs cannot be met within a given area of the school system.

## 2. CAPACITY ENHANCEMENTS

Capacity enhancements are defined as permanent methods for accommodating future needs. Examples include the construction of additions or installation of modular additions.

## 3. RENOVATION PROGRAMS

Renovations are aimed at ensuring that all schools provide the facilities necessary to support current educational programs regardless of the age of the buildings. Renovations are also used to restore capacity lost due to low-ratio special program instruction and other new instructional support needs (e.g., technology labs). Depending on need, a renovated school may acquire a new heating plant, air conditioning, upgraded electrical and plumbing systems, and spaces required to support the educational program. Both the usable lives of school facilities and School Board policy require renovation of buildings on 20-25 year cycles. Given the number of schools now in operation, this need implies a requirement to renovate an average of one high school, one middle school, and six elementary schools per year.

## 4. SPECIAL PROGRAM FACILITIES

The CIP includes funding to provide capacity enhancements at various schools in order to accommodate special programs such as Advanced Academic Programs and Special Education at the elementary and middle school levels. Additionally, FCPS periodically undertakes other capital projects to support its facilities. Examples include installation of safety and security systems as well as improvement of facilities for students and citizens with disabilities.

## 5. SITE ACQUISITION

The CIP proposes funding to acquire sites for future schools.

## STUDENT MEMBERSHIP PROJECTIONS PROCESS

FCPS produces two projection sets each school year. Once the school year begins, a five-year school-byschool projection set is produced. The last year of this set is used for the annual Capital Improvement Program. Additionally, FCPS produces a six-month projection set each spring for the upcoming school year.
The FCPS student membership projections process involves several steps.
STEP 1: Analysis of trends and patterns at the school system level, pyramid level, and school level.
Examples of factors that are analyzed to understand historic and current trends to prepare for enrollment projections:

- Total student membership is compared to historical patterns of membership.
- Fairfax County and the City of Fairfax births (by elementary school boundary) are compared to the kindergarten class five years later. These ratios are compared to historical patterns of birth to kindergarten ratios.
- Kindergarten class membership is compared to the previous school year's exiting 12th grade class. These numbers are compared to the past school system patterns.
- Each grade level cohort of students is compared to its previous year to understand the difference in the grade level cohort membership over time. This is referred to as "cohort progression." Ratios are developed to understand the survival rate of each cohort as it ages through the school system. This is compared to past cohort patterns.
- Fairfax County and the City of Fairfax population and housing forecasts and trends are considered to better understand local and regional economic conditions.
- Migration patterns of students entering and exiting the school system are compared to the prior year, as well as to historical patterns of migration.
STEP 2: Development of student membership projections from elementary schools to middle schools to high schools.

Factors used to produce membership projections are:

- Entering kindergarteners are projected by using actual births from prior five years by elementary school boundary and applying a birth to kindergarten ratio.
- Past cohort survival ratios are used to progress each cohort through successive grades ahead. Multi-year averages of grade level progression are considered when projecting for upcoming school years.
- Entry grades to middle school and high school are projected using historical cohort ratios of students residing in a school's boundary compared to the membership at the school. These ratios are applied to rising cohorts in the school's boundary.
- Modifications and adjustments are made, as needed, to account for other factors which may influence a particular school's membership. Examples of this include: boundary phasing decisions, housing developments, and other relevant information unique to a specific school or group of schools.

STEP 3: Special program student membership projections are factored into projections.

- Unique programs are considered as they may impact school specific membership.
- School-by-school projections from various specialists are received for: level IV advanced academic

## MONITORING MEMBERSHIP IMPACTS FROM NEW HOUSING

FCPS monitors residential development through development review and field verification of development status:

## Development Review: Comprehensive Plan Studies and Rezoning Application Review

FCPS works with the Fairfax County government to determine the impact planned housing would have on school facilities. The planned housing are proposed from comprehensive plan studies and rezoning applications. School impact analysis memos with estimated student yields from the planned and proposed development are provided to Fairfax County government and also distributed to the appropriate School Board members.

In addition to the estimated student yields, for comprehensive plan studies, recommendations to address future school facilities needs are provided to Fairfax County government. Recent long-range planning initiatives include Tysons Urban Center, Reston, Dulles Suburban Center (Route 28 Corridor), Bailey's Crossroads Community Business Center (CBC), Seven Corners CBC, Franconia-Springfield Transit Station Area (TSA), and Embark Richmond Highway (Route 1). These long-ranged planning initiatives and comprehensive plan studies are often the first step for planned new housing.

## Development Monitoring

In conjunction with the development review process, FCPS staff conduct field verifications of previously approved applications to track the construction status of residential development. Additionally, development can be constructed by-right (i.e. does not require a rezoning development application to construct) and this verification process allows FCPS staff to gain insight into changes in a community. This verification process helps provide a better understanding of when and where students from these developments will enter the school system and have an impact on nearby schools.

## ASSESSMENT OF FACILITY CAPACITY

Understanding and accurately capturing school capacity is important to ensuring the most efficient use of school facilities and capital funds. Knowing how many students a school can accommodate allows FCPS to quickly assess appropriate program placement and to develop student accommodation solutions. Accurate school capacity assessments help to ensure that classroom spaces are sized appropriately and spaces are designed with flexibility in order to meet the needs of multiple and/or changing instructional programs. Beyond current programmatic and membership challenges, accurate capacity assessments are necessary to formulate long-term facility plans.

As a follow-up to the 2007 DeJong Capacity Study and the 2008 implementation of a new methodology for school capacity calculation, FCPS provided detailed school capacity and facility information on the public website in the form of a Facility and Enrollment Dashboard, which may be found at:
https://www.fcps.edu/enrollmentdashboard.

## School Capacity Model

It is important to note that school capacity is measured differently depending upon the school type. For instance, elementary schools are calculated based upon the number of core classrooms and self-contained special education class rooms. While some middle schools are team taught, which limits the amount of students to the quantity of rooms required to support a team, others follow the departmental teaching model and need to be assessed similarly to high schools. High school capacity is far more complex than that in elementary and middle schools. The capacity of a high school is based upon the required core programs and the various elective options available. For more information on school capacity calculation methodology please refer to the "Methodology and Calculations" link at https://www.fcps.edu/ enrollmentdashboard.

## School Capacity: Information and Assessment

Having determined the methodology that would be used to determine capacity for elementary, middle, and high schools, it is then necessary to determine how each individual school uses its spaces. The Office of Facilities Planning Services staff includes capacity architects who manage and process the annual capacity and utilization surveys for each traditional K-12 school. In this survey, school administrators are asked to indicate use of their spaces (including modular and temporary classrooms) based on their current programs. Upon receipt of the surveys, capacity architects apply the developed methodology to recalculate the capacity of each school. The capacity is calculated considering the school building design, unique school characteristics, and program changes. Lastly, capacity architects, working closely with planning staff, use certified membership and five-year projected membership to determine the current and projected capacity utilizations. These help to identify schools with critical capacity deficits or surpluses, which inform and direct facilities planning activities such as: identifying schools that should be closed to student transfers; prioritizing potential temporary classrooms and building additions; and guide new program placement and possible boundary changes. Information on current and projected capacity utilization can be found in the Membership and Capacity Comparisons section. Modular additions continue to be counted towards capacity while temporary facilities or classrooms (trailers) do not. Temporary classrooms will continue to remain on site in many schools where small capacity deficits or even capacity surplus exists. This is largely due to lack of funding to remove and store these structures elsewhere, and due to changes in programs which require specialized spaces within school buildings. Trailer relocations, however, will take place when additional trailers are needed to accommodate an increase in membership at specific schools. The annually updated modular and temporary trailer counts for each school can be found within the Membership and Capacity Comparisons section.

Expanded facility and membership information for all schools may be viewed at the following link: https://www.fcps.edu/enrollmentdashboard under the link "Facility \& Enrollment Dashboard."

## Temporary Classroom Needs

Fairfax County Public Schools has established a supplemental capacity method to accommodate students through the temporary provision of portable classroom trailers. This resource allows the School Board to maintain intended student-per-classroom and per-instructor ratios despite short-term fluctuations in school memberships.

Temporary classrooms (trailers) are in use to address student membership and program requirements at schools and centers where the buildings themselves lack sufficient capacity. FCPS is implementing multiple strategies to reduce the use of temporary facilities. These include architectural modification of existing spaces to provide additional instructional areas, expanding capacity as part of a school renovation, relocating modular additions as permanent construction is completed, and shared use of School Aged Child Care (SACC) classrooms during the regular school day.

## Membership and Capacity Comparisons

To be effective as a planning tool, comparisons between membership and capacity should be performed
included in the Region Summaries section.

## Countywide Comparison

FCPS compares five-year projected capacity by level and by geographic areas. This helps inform analyses about membership trends and trends in surplus and deficit capacity throughout the entire school system. It also helps identify projected capacity needs throughout the school system.

## School Level Comparisons

A better understanding of FCPS' ability to accommodate students and their instructional needs emerges by reviewing the circumstances at individual schools. Comparisons of school capacity and projected membership for individual schools at all levels are presented in the following region summaries.

Note that the impact of funded new schools (if any) is not reflected in this analysis since the effect for any one school cannot be determined until the new boundary is drawn. Although additional capacity provided by a modular building is included in the analysis, the benefits of any temporary classroom allocated to the schools is not reflected as they are not part of permanent building capacity.

## EACTORS

## FACTORS THAT INFLUENCE STUDENT MEMBERSHIP AND PROJECTIONS

Various factors influence the overall annual student enrollment and projections.
These demographic factors include:

- Overall population trends in Fairfax County
- Overall housing development trends in Fairfax County
- Overall economic conditions in Fairfax County
- Number of births in Fairfax County as compared to the number of kindergarten students who enter the school system five years later
- New students who come to Fairfax County Public Schools as compared to those who withdraw from the school system (also known as in-migration and out-migration)
School-by-school enrollment and projections are also influenced by:
- Phasing of boundary adjustments
- Phasing of program change adjustments
- Program needs
- Student transfers

Staff in Fairfax County Public Schools analyzes these data sets as part of the annual projections process.
The following graphs show the most recently updated data sets available to FCPS, which influence the overall student enrollment and projections.

## STUDENT MIGRATION

Student Migration provides an understanding of the number of new students who entered the school system (in-migration) as related to the number of students who withdrew from the school system (out-migration). Net migration is the total number of students gained or withdrawn from the school system.

A variety of factors make migration difficult to anticipate because it can change in the short term due to political, economic, or environmental circumstances. A few examples of these factors are: the performance of the job market, housing development and sales, and severe weather events. Student migration can have a significant effect on projections, grade level trends, and school-by-school projection accuracy. The following graphs display historical and current migration trends. Over the past five years, FCPS has seen a net in-migration of students, meaning we have had more students that enrolled than withdrew.

HISTORICAL MIGRATION

Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECEP/Head Start, preschool (wherever applicable), home schooled, ESOL transitional high school, and special education centers. Membership numbers do not include: adult education, private school special education, and

HISTORICAL NET MIGRATION

Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECEP/Head Start, preschool (wherever applicable), home schooled, ESOL transitional high school, and special education centers. Membership numbers do not include: adult education, private school special education, and multi-agency. Dates for official budget counts are: special education and special education preschool (December 1); nontraditional sites (January 31); and FECEP/Head Start (March 31).

## NET MIGRATION BY GRADE LEVEL

School Year 2016-17 to SY 2017-18 Comparison

Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECEP/Head Start, preschool (wherever applicable), home schooled, ESOL transitional high school, and special education centers. Membership numbers do not include: adult education, private school special education, and multi-agency. Dates for official budget counts are: special education and special education preschool (December 1); nontraditional sites (January 31); and FECEP/Head Start (March 31).

## HISTORICAL AND PROJECTED KINDERGARTEN ${ }^{1}$

Membership Compared to Birth²

Note: ${ }^{1}$ Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECEP/Head Start, preschool (wherever applicable), adult education, private school special education, home schooled, multi-agency, ESOL transitional high school, and special education centers. Dates for official budget counts are: special education and special education preschool (December 1); nontraditional sites (January 31); and FECEP/Head Start (March 31). ${ }^{2}$ Birth data from the Virginia Department of Health, Division of Health Statistics ${ }^{3}$ Projected births, since at the time of publication births had not yet been reported for these years by Virginia Department of Health.

## CURRENTSTATE AND FUTUREOUTLOOK

The next section of the Capital Improvement Program includes information that changes each year in response to actual September 30th membership and the most recent student membership projections.

Components of this section show information about the "current state" and "future state" of FCPS. The section begins with information about recently completed capital projects including new schools, renovations, and capacity enhancements. These projects add seats to FCPS which increases the ability to accommodate student membership growth. Next, information is presented about the most recent student membership and projections. Specifically, data will be shared about current membership along with the most recent five-year membership projections based on current membership, current capacity along with anticipated capacity as impacted by the membership projections, and any capacity changes due to capital construction.
This section also contains the Capital Construction Cash Flow. This table details how much money has been spent on each of the listed projects, how much approved bond-funded money is planned to be spent in the future, and how much unfunded money (from future bonds) is needed to complete all projects. FCPS is limited to spending $\$ 155 \mathrm{M}$ per year on capital construction with funds from the Fairfax County Bond. Citizens consider a new bond every two years. Construction and renovations take place in three stages: planning, permitting, and construction. Because of this, elementary schools renovations typically take four years to complete, while middle/high schools typically take six years to complete. Construction additions typically take four years for planning, permitting, and construction. Lastly, relocating modular additions typically takes two years for permitting and construction.
Capital construction projects, as will be shown in more detail, are those related to new school construction, capacity enhancements, renovations, and site acquisition for future FCPS needs. Modular relocations are funded through the general construction fund. The Capital Construction Cash Flow order is based on the Renovation Queue Status order along with projects that are needed to accommodate expected student membership growth.

At the conclusion of the section, a Priority Recommended Boundary Adjustment table lists boundary adjustments that are proposed in order for FCPS to use new capacity that has been built through the capital program.

## STUDENT MEMBERSHIP AND PROJECTIONS

Each year, Fairfax County Public Schools produces a five-year projection set that is used for capital planning. Student counts for FECEP/Head Start, special education pre K-12, general education, advanced academic programs, alternative programs, nontraditional sites, ESOL transitional high schools, and post graduate students are included in CIP figures because school system facilities house these students. All counts used for CIP historical and projected membership are based on certified September 30th membership in the identified school year. It is important to note that historical membership and projected membership figures for CIP planning do not include counts of students who receive services through multiagency programs, private school special education, home schooled, and adult education, since school facility capacity calculations do not include these counts.

The following tables and graphs provide both historical and projected membership. The CIP five-year student membership projections show an overall contracted growth in the future forecast. This is a change from the higher growth levels experienced in Fairfax County Public Schools in recent years. The primary causes for this projected contraction of growth are smaller entering kindergarten cohorts and a decline in net migration. The projections include indicators that elementary aged student membership will decrease in the future due to smaller entering cohorts replacing larger exiting cohorts. Middle school and high school will experience moderated growth. This is due to the fact that larger cohorts of students currently in the upper elementary school grades will progress into middle school and high school during the upcoming five-year period.

FIVE-YEAR PROJECTIONS SCHOOL YEAR 2018-19 THROUGH SCHOOL YEAR 2022-23

## DETERMINING RENOVATION REQUIREMENTS

Approximately two out of every three Capital Improvement Program dollars are earmarked for renovation of existing school facilities. This significant expenditure reflects the age of FCPS facilities and the School Board's commitment to ensuring that all schools contain the facilities necessary to support current educational programs. Ideally, renovations should be programmed to accommodate a 20-25 year cycle in order to protect our capital investment. The renovation program is funded and executed according to a published priority listing, known as the Renovation Queue, which is based upon condition assessments provided by independent architectural and engineering firms.

FCPS commissioned school evaluation studies in 1988, 2000, and 2008. The first two studies assessed buildings on two criteria-the condition and age of the facility. The Department of Facilities and Transportation Services and the School Board subsequently determined that these two evaluation criteria were not adequate to capture FCPS needs. When the new facility evaluation study was commissioned in 2008, the following evaluation criteria, weighted by importance, were developed:

- Quantity and quality of core instructional spaces. 40\%
- Age and condition of the facility 30\%
- Quantity and quality of supplemental instructional space. 10\%
- Adequacy of administrative and support space. .10\%
- Code compliance of the facility 10\%

Multiple teams of architects and engineers evaluated each FCPS school that had been constructed or renovated prior to 1992—a total of 63 schools. The scores were totaled from each consulting team, resulting in the ranked order of schools from the lowest need to the highest. The following table displays the ranked order as well as the funding status of the schools within the Renovation Queue.

Presently, 40 of the 63 schools in the 2008 Renovation Queue have received funding for planning or construction. Over the past four years 14 schools have been renovated and an additional 10 schools are in the midst of construction. Within the next year we expect another eight schools will begin their renovation projects. Our current estimates based upon construction costs, available funding and projected capacity requirements indicate that all of the schools within the queue will have funding for either planning or construction by the fall of 2027. It is likely that a new queue will need to be created by 2023.

## RENOVATION QUEUE STATUS

Note: Recommended boundary adjustment options and program changes are included in the CIP for future consideration only. Any option chosen for potential implementation will be discussed and decided through a transparent process that engages the community, in accordance with School Board Policies and Regulations. This includes adjustments needed for advanced academic program centers at existing facilities and newly identified site locations.

## BOUNDARY FEASIBILITY

Additional School Board member identified areas to consider for future boundary adjustments:

| MAGISTERIAL DISTRICTS | REGION | PYRAMID |  |
| :--- | :--- | :--- | :--- |
| Braddock | 5 | Woodson | Wakefield Forest ES |
| Braddock/Mason/Springfield | $4 / 5$ | Robinson/Woodson | Oak View ES/Olde Creek ES |
| Braddock/Providence | 5 | Woodson | Little Run ES |
| Braddock/Springfield/Sully | $4 / 5$ | Centreville/Robinson | All Elementary Schools |
| Mason | 2 | Justice | Glen Forest ES |
| Providence | 2 | Falls Church | Pine Springs ES |
| Providence | 2 | Marshall | Shrevewood ES |
| Providence | 1 | Oakton | Mosby Woods ES |

## MEMBERSHIP AND CAPACITY COMPARISONS

## Reader's Guide to the Membership and Capacity Comparisons

This section includes information about the current and future capacity of all K-12 FCPS schools. As an effective planning tool, comparisons between membership and capacity are performed at three levels: countywide, regions, and individual schools.

The Membership and Capacity Comparisons section is divided into two parts. The first includes countywide tables and maps based on the current school year and the projected SY 2022-23 program capacity utilization by school level - elementary, middle, and high. These include the capacity utilization thresholds described on the following page. The comparison of the projected SY 2022-23 program capacity utilization by level and geographic region helps analyze trends in membership and school capacity throughout the entire school system.

The second part of the section consists of a summary by individual region including: region map, potential solutions to capacity deficit, school instructional and special education programs table, and a region summary table illustrating each school's current and projected membership and program capacity utilization percentage.

## Capacity Deficit and Capacity Utilization Relationship

The term capacity deficit is used to refer to a school with a membership higher than its program capacity, also known as overcrowded. The capacity utilization percentage of a school is determined by dividing the program capacity by the membership. A school with a utilization percentage greater than $100 \%$ is considered to have a capacity deficit. However, there are different degrees of capacity deficits, and due to limited funding, thresholds have been established to identify schools with capacity needs which may require adding physical classroom space or simply reprogramming existing spaces. The thresholds below identify the different degrees of capacity deficits and are the basis for the tables and maps in this section.

## Capacity Utilization Thresholds

- $115 \%$ or More - Schools considered to have a substantial capacity deficit.
- 105\%-114\% - Schools considered to have a moderate capacity deficit.
- $95 \%-104 \%$ - Schools monitored due to approaching a capacity deficit or to having a slight capacity deficit.
- $85 \%-94 \%$ - Schools considered to have sufficient capacity for current programs and growth.
- Less than $85 \%$ - Schools considered to have a capacity surplus.

## CAPACITY RELATED TERMS

Please refer to the Glossary of Terms for a definition of the following terms: design capacity, program capacity, capacity utilization, capacity deficit, and capacity surplus.

## School Capacity Deficit and Potential Solutions

Following the Guiding Principles identified in the Regulation Framework section, the potential solutions section of the CIP identifies options to consider for schools with a capacity deficit. It is important to note that for schools needing capacity support throughout the school year, due to membership growth or programs, a thorough assessment of the school capacity and utilization is performed in order to determine appropriate solutions to consider.

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficits. For consideration purposes, as many options as possible have been identified for each school, in no significant order, and may be contingent on other potential solutions listed. Any options chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

## Potential Solutions Criteria

Considering the Guiding Principles in the Regulation Framework section and the limited funds available, the following criteria have been established to determine which solutions to consider for each school. Please note that this is used as an initial criteria for preliminary analysis only and is not intended to be a comprehensive list due to the specific characteristics of each school.

1. Utilization Percentage: Current and projected program capacity utilizations of all schools are reviewed for current and projected capacity deficits (refer to the Capacity Utilization Thresholds descriptions). Different degrees of capacity deficit would require different types of solutions.
2. Utilization Survey: The school's utilization survey plan is reviewed annually for efficient use of instructional spaces (including temporary classrooms) to determine if the capacity deficit can be accommodated through reassignment of spaces.
3. Renovation Queue: If the school is in the 2008 Study Final Rankings Renovation Queue, or is scheduled for a capacity enhancement, a temporary solution could be considered to accommodate the current capacity deficit until the completion of renovation.
4. School Programs: The programs in a school could greatly impact the capacity of a school. These can either reduce the size of the classrooms (number of students per class), or increase membership (students transferring into a school).
5. Student Transfers - In and Out: The in and out student transfers of a school are typically closely related to the programs which the school may or may not have. These can both increase or decrease the membership in a school and impact the school's utilization percentage.
6. Temporary Classrooms: The number of temporary classrooms at a school, along with their usage, is reviewed to determine if these are sufficient for the current capacity deficit. An increasing number of required temporary classrooms could be an indicator that a more permanent solution, such as a building addition or a boundary adjustment may be considered.
7. Modular Classrooms: Classrooms in modular buildings are included in the design and program capacity of a school. If a school has both temporary and modular classrooms and has current and projected capacity deficits, this could be an indicator that a more permanent solution, such as a building addition or a boundary adjustment may be considered.
8. Schools with Capacity Surplus: Schools with a capacity surplus which may provide capacity relief to overcrowded schools through boundary adjustments or program changes.

## School Programs Table

The potential solutions section for each region is immediately followed by the Instructional and Special Education School Programs table. This table includes all the schools (by pyramid) within the region, the school status if any (Title 1, K-3 Cap), and the instructional and/or special education programs. The table also indicates if the programs accept students from outside the school boundary, or if these are only school-based programs (see key at bottom of the table). Instructional and special education programs have an impact on the capacity of a school.

## Region Summary Table

Each region section ends with a region's summary table titled "SY 2017-18 Capacity, Membership, and Projections." The table is divided by high school pyramids, which include all the assigned K-12 schools. The following information is provided for each school: school design capacity, current program capacity, membership, program capacity utilization percentage, number of temporary classrooms, number of modular classrooms, five-year projections, and projected program capacity utilization percentage. The diagram below illustrates the different parts of the table and is presented as a guide to understanding the information provided.

## FCPS Capacity Balance Summary Table

Lastly, the FCPS Capacity Balance Summary table illustrates the countywide current and projected capacity surplus or deficit (seats). This table shows the total quantities by region, pyramid, and school level.

## COUNTYWIDE CURRENT AND PROJECTION CAPACITY UTILIZATION SY 2022－23

## ELEMENTARY SCHOOL CAPACITY UTILIZATION

ELEMENTARY SCHOOL
Utilization of 115\％or More in SY 2022－23

| SCHOOL NAME | CAPACITY UTILIZATION |  |
| :--- | :---: | :---: |
|  | SY 2017－18 | SY 2022－23 |
| Wakefield Forest Elementary | $123 \%$ | $142 \%$ |
| Shrevewood Elementary | $116 \%$ | $127 \%$ |
| Lemon Road Elementary | $106 \%$ | $123 \%$ |
| Pine Spring Elementary | $125 \%$ | $122 \%$ |
| Kent Gardens Elementary | $121 \%$ | $120 \%$ |
| Springfield Estates Elementary | $111 \%$ | $118 \%$ |
| Orange Hunt Elementary | $104 \%$ | $117 \%$ |
| Columbia Elementary | $111 \%$ | $117 \%$ |
| Flint Hill Elementary | $106 \%$ | $117 \%$ |
| Mosby Woods Elementary | $109 \%$ | $115 \%$ |

Schools with a capacity utilization percentage of $115 \%$ or more are considered to have a substantial capacity deficit．

## ELEMENTARY SCHOOL

Utilization Between 105\％and 114\％in SY 2022－23

| SCHOOL NAME | CAPACITY UTILIZATION |  |
| :--- | :---: | :---: |
|  | SY 2017－18 | SY 2022－23 |
| Washington Mill Elementary | $116 \%$ | $113 \%$ |

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

## ELEMENTARY CAPACITY

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

SY 2017-18 Instructional and Special Education School Programs
PROGRAM ABBREVIATIONS:
FECEP / HEAD START FAMILY AND EARLY CHILDHOOD EDUCATION PROGRAM / HEAD START EARLY HEAD START
ELEMENTARY SCHOOL ADVANCED ACADEMIC PROGRAMS IGH SCHOOL ADVANCED PLACEMENT
HIGH SCHOOL INTERNATIONAL BACCALAUREATE DIPLOMA PROGRAM HIGH SCHOOL ACADEMY
ENGLISH FOR SPEAKERS OF OTHER LANGUAGES EARLY CHILDHOOD CLASS-BASED PRESCHOOL AUTISM CLASS AUTISM COMPREHENSIVE SERVICES SITE
INTELLECTUAL DISABILITIES intellectual disabilities severe DEAF OR HARD OF HEARING BLIND AND VISUALLY IMPAIRED PHYSICAL DISABILITIES
SECONDARY TRANSITION TO EMPLOYMENT PROGRAM

' Program hours occur after regular school hours. Additional program sites at Pimmit Hills Center, Bryant HS, and Graham Road Schoo

Additional ECCB and PAC sites at Pimmit Hills Center.
${ }^{3}$ Public Day sites at Cedar Lane School, Quander Road School, Burke School, Kilmer Center and Key Center.
${ }^{4}$ Governor's School.
Y - Accepts students from inside and outside school boundary.
Y-SB - School-based students only.
Y-HI - Program for students with hearing impairment.

REGION 3 | SY 2022-23
ELEMENTARY CAPACITY

Note: Based on 2017-18 school year boundaries

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

Capacity Utilization Percentage

Note: Based on 2017-18 school year boundaries

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

Comparisons section
 do not include: adult education, private school special education, home schooled, multi-agency, transitional ESOL high schools, or special education centers.

- For schools with utilization percentage in red, refer to Potential Capacity Solutions section.
- Numbers in italics are future design capacity and projected capacity utilization percentages after a renovation or capacity enhancement.
${ }^{1}$ Boundary study impact. Schools currently going through phased-in boundary change
${ }^{2}$ Significant program or facility changes
${ }^{3}$ General education and AAP center school.

## SOLUTIONS

The following is a list of potential solutions to consider to alleviate current and projected school capacity deficit(s). For consideration purposes, as many options as possible have been identified for each school, in no significant order and may be contingent on other potential solutions listed. Any option(s) chosen for implementation will be discussed and decided through a transparent process with the appropriate stakeholders, in accordance with School Board Policies and Regulations.
A. Increase efficiency by reassigning instructional spaces within a school to accommodate increase in membership.
B. Possible program changes.
C. Minor interior facility modifications to create additional instructional space and help to accommodate capacity deficit.
D. Add temporary classrooms to accommodate short-term capacity deficit.
E. Repurpose existing inventory of school facilities not currently being used as schools.
F. Capacity enhancement through either a modular or building addition.
G. A new Fairfax/Oakton Area Elementary School has been proposed for planning in the 2017 Bond Referendum to provide capacity relief within the area.
H. Potential boundary adjustment with schools having a capacity surplus.

[^4]- A guide to understanding the information on these tables can be found at the beginning of the Membership and Capacity Comparisons section.
- Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECE Based on September 30 certified membership for purposes. Membership numbers include: general education, special education, AAP, $\operatorname{FECEP/Head~Sta.~}$ - For schools with utilization percentage in red, refer to Potential Capacity Solutions section.
- Numbers in italics are future design capacity and projected capacity utilization percentages after a renovation or capacity enhancement.
${ }^{1}$ Boundary study impact. Schools currently going through phased-in boundary changes.
${ }^{2}$ Significant program or facility changes.
${ }^{3}$ General education and AAP center school.
${ }^{4}$ Design capacity of McNair ES includes future design capacity of North West County Elementary School.

## FACILITIES CONDITION ASSESSMENT

Implementation of facility condition assessments will assist OFM to adequately identify, or validate backlogs of deferred maintenance and further prioritize capital renewal needs. This condition based approach will supplement the life cycle analysis already incorporated in OFM's asset management program and Comprehensive Investment Capital Plan (CICP). Furthermore, once completed the assessment will allow OFM to prioritize our requirements and focus on those assets most likely to fail, thus limiting our failures, disruptions and ultimately risk reducing our risk.

## ISSUES/CONCERNS

FCPS has not performed facility condition assessments since 2008. The cost of performing detailed condition assessments and maintaining large quantities of data for large facilities can be prohibitive.

## APPROACH/BACKGROUND

PHASE 1: Execution of high-level facilities inspections using parametric estimating methods to establish the order in which more in-depth inspections should occur and to develop overall budgetary requirements.

LOGIC: When a facility is large enough and has a fairly representative set of building types, parametric estimating methods can be used to rapidly and systematically assess the buildings and systems of the facility. The key to the accuracy of parametric estimation is consistency in evaluating systems and/or selection of an unbiased and representative sample from the entire population, large enough to assure the level of accuracy required. Random sampling techniques are used to select the individual assets for the sample set.

PHASE 2: Execution of a systematic review process using more in-depth inspections of facilities over a five year period ( $20 \%$ of facilities each year). Inspection of facilities (worst to best) based on results of parametric estimates from Phase 1.

LOGIC: In-depth inspections will quantify results of parametric estimates from Phase 1. Allows for regular assessments of schools. Establishes order of future inspections. Identifies and prioritizes specific projects. Ensures most urgent requirements are addressed in a timely manner. Allows for calculation of Facility Condition Index (FCI). Identifies the total deferred maintenance backlog of FCPS facilities to understand the financial impact of capital projects detailed in the CIP.

## TASKS STATUS/TIMELINE FOR IMPLEMENTATION

PHASE 1: Review, validate and update OFM's current asset life cycle information (asset years of life and estimated replacement cost). Then perform facility condition assessments on all FCPS sites 27 million square feet using parametric estimating methods ( $\$ 0.02 \mathrm{sq}$. /ft.). Total estimated cost for Phase $1=\$ 550 \mathrm{~K}$.

PHASE 2: Implementation of a systematic review process using more in-depth inspections ( $\$ 0.16 \mathrm{sq}$. / ft.) to inspect the remaining facilities (worst to best) over a five year period ( $20 \%$ of facilities each year/ 5.4 million square feet). Total estimated yearly cost for Phase $2=\$ 864 \mathrm{~K}$ each year for 5 years.

## SUMMARY

Implementation of the departments CICP provides objective, consistent, accurate, and repeatable results to identify a credible capital renewal funding forecast. Through the revision of its current asset management processes and data standards along with the implementation of new processes like calculation FCl and performing facility condition assessments, OFM can better prioritize work and justify its funding requirement by providing current accurate data. This will ultimately improve the capital planning process to maximize FCPS return on investment while decreasing asset failure rates and negative impact on our facilities.

The Office of Facilities Management provides the educational, clean and healthy environment for the employees and students while striving for a premier workforce that has the right tools, training and funding to complete our assigned tasks. Our focus will be on safety, asset sustainability, and student successes with our caring culture and resource stewardship through:

- Reactive and Preventative Maintenance
- Energy Management and Building Automation Controls
- Snow Removals and Grounds Maintenance
- Operational Control of the Custodial Program
- Facilities Resource and Asset Management Programs
- Major Maintenance to Replace Systems > Useful Life Cycle
- Ten-year Comprehensive Investment Capital Plan (CICP)
- While Maintaining over $\$ 128 \mathrm{M}$ in Deferred Maintenance, see table below

The national average for capital improvement investments prior to renovation is $2 \%$ of Current Replacement Value (CRV) yearly, we are only at .04\%, thus increasing our Deferred Maintenance for FY15 at $\$ 99 \mathrm{M}$, to FY16 at $\$ 110 \mathrm{M}$, and to the FY17 current level of $\$ 128 \mathrm{M}$.

We currently have $\$ 670 \mathrm{M}$ in critical assets tagged in the system, yet we know there are more past their Useful Life not yet captured of the $\$ 6.3 \mathrm{~B}$ in total Current Replacement Value assets. Not all the asphalt, painting, plumbing, are included because it's an ongoing Asset Management Initiative. In addition our new Assessment Index, using criticality and condition, has improved our prioritization of critical projects prior to failure. In order to continue this progression, we need a phased approach to more accurately attain the condition assessment instead of End of Useful Life calculations.

## GLOSSARY OF TERMS

## ADDITION

Permanent construction that adds square footage to a school and is subject to all Fairfax County zoning, building codes, and permitting processes.

## ADMINISTRATION (SPACE)

Spaces which support the administrative staff such as: offices, work rooms, and storage.

## ADVANCED ACADEMIC PROGRAM (AAP) CENTER

A school that has been identified to educate students who qualify for Level IV Advanced Academic Services in FCPS on a full-time basis in order to receive a challenging instructional program in the four core subject areas. Students in this program are grouped together for their core instruction by grade level. This was previously known as a "Gifted and Talented Center."

## ADVANCED ACADEMIC PROGRAM LOCAL LEVEL IV PROGRAM (NON-CENTER BASED)

A program that provides students another avenue to access advanced academic services in their base school. Center-eligible students, who choose to remain in their local school, receive the same advance academic curriculum as students who attend centers. Depending on the number of eligible students at the local school, a student will attend classes with other eligible students and/or other high achieving students. This was previously known as the "Gifted and Talented Program."

## ALTERNATIVE PROGRAMS

A variety of intervention and support programs for students at risk for expulsion for inappropriate behavior, students conditionally expelled, and students whose adjustment to traditional education interferes with successful participation in general education. Student membership projections and
historical membership reports include students enrolled in nontraditional programs in such numbers where noted.

## ATTENDANCE ISLAND

A geographic area assigned to a particular school's boundary, but does not share any adjacencies with the rest of the school's boundary.

B

## BIRTH TO K RATIO

A ratio that shows the number of live births in an elementary school boundary by the number of kindergarten students who enroll in that elementary school five years later.

## BOND

A written promise to pay a specified sum of money (called the principal) at a specified date in the future, together with periodic interest as a specified rate. Bonds are a form of long-term borrowing used for capital improvements and new construction.

## BUILDING LIFE CYCLE

Life span of a building in which all components of the construction operate efficiently and meet the requirements of the occupants. Construction components include mechanical, plumbing, and electrical; heating, ventilating, and air conditioning (HVAC); and architectural installations.

## CAPACITY

The number of students a school can support when the restriction of program of studies is applied.

## CAPACITY DEFICIT

Term used when referring to a school with a greater membership than its program capacity.

## CAPACITY ENHANCEMENTS

Permanent construction that provides additional classroom space and therefore increases school capacity.

## CAPACITY SURPLUS

Term used when referring to a school with a membership smaller than its program capacity.

## CAPACITY UTILIZATION

Percentage of program capacity that is utilized by the total student membership within a school. In this CIP the terms "capacity utilization" and "program capacity utilization" are used interchangeably.

## CAPITAL BUDGET

This budget provides for school construction projects which include new construction, renovations, capacity enhancements, site acquisitions, and additions. The primary source of funding for capital budget is the sale of bonds authorized by the voters in the bond referendum.

## CAPITAL IMPROVEMENT PROGRAM (CIP)

The CIP is a planning document used as a basis to determine the timing and size of proposed bond referenda to be placed before the voters of Fairfax County. The primary source of funding for school construction projects is the sale of bonds authorized by the voters in these referenda.

## COHORT

A group of students who are educated at the same period of time - a grade level or class.

## CORE (SPACE)

Mandatory learning spaces such as primary, elementary and self-contained special education classrooms; required classes in middle and high school.

## DESIGN CAPACITY

Capacity based on the number of students a building can support per the original design of the building. The design capacity remains constant until a school undergoes a renovation or addition.

## DEVELOPMENT CENTER

A geographic area identified by the Fairfax County Comprehensive Plan where the majority of future development, including new housing, will be focused.

## EARLY CHILDHOOD CLASS BASED (ECCB) SERVICE

Provides instruction in a classroom setting and is located in a number of elementary schools within FCPS. The curriculum is language rich and emphasizes communication, early literacy, social development, and development of other skills as designated in the student's Individualized Education Program (IEP).

## EARLY HEAD START (EHS)

A full-day program housed within the schools, providing comprehensive services to incomeeligible infants, toddlers, and expectant mothers living in Fairfax County. Head Start funds provide services to 48 students in FCPS each year. (See FAMILY AND EARLY CHILDHOOD EDUCATION PROGRAM/HEAD START (FECEP/HS))

## EDUCATIONAL SPECIFICATIONS

Explicit requirements mandated by the Virginia Department of Education and the Fairfax County School Board, which are necessary to create a common set of expectations including square footage and design features of spaces across school buildings.

ENGLISH SPEAKERS OF OTHER LANGUAGES (ESOL)
A program to help students with limited English proficiency learn literacy and content concepts in order to function successfully in the general education program.

## ENROLLMENT

The total number of students that have completed registration in a given school unit on a daily basis. For CIP reporting purposes, membership numbers are used. (See MEMBERSHIP)

## FACILITIES AND ENROLLMENT DASHBOARD

A resource that calculates capacity of each school based on the programs that currently are offered at the school and its comparison to the core capacity of the school. It includes information about projected enrollments of the school, number of temporary classrooms, and other facilities information. This resource is available on the FCPS website at https://www.fcps.edu/ enrollmentdashboard.

## FAMILY AND EARLY CHILDHOOD EDUCATION PROGRAM/HEAD START (FECEP/HS)

A full-day preschool program housed within the schools, providing comprehensive services to income-eligible three (3) and four (4) year olds living in Fairfax County. Head Start, Virginia Preschool Initiative and Virginia Preschool Initiative Plus grant funds are braided with local funds in order to provide services to more than 1,750 students each year. (See EARLY HEAD START (EHS))

## FEEDER SCHOOL

A school from which many or most students progress to a particular higher-level school. For example, an elementary school is feeder school to a middle school.

## FISCAL YEAR (FY)

A 12-month period used for accounting and reporting purposes and preparing financial statements in an organization. FCPS' financial year encompasses the 12 months beginning July 1 and ending the following June 30 .

## FREE AND REDUCED-PRICE MEALS (FRM)

This program is required for participation in the federally-funded school lunch program under the National School Lunch and Child Nutrition Acts. This program provides free or reduced meals to children determined to be eligible under the program and support the belief of the Fairfax County School Board that every school-age child should have an adequate lunch.

## GENERAL EDUCATION PROGRAM

The education programs that serve students in the core instructional areas, namely elementary, middle, and high school instruction.

## GRANDFATHERING

(See PHASING OF ADJUSTMENTS)

## H

## IMMERSION PROGRAM

Education program of acquiring a world language through content matter instruction. FCPS uses two program models: World Language (or One-Way) Immersion or Two-Way Immersion.

## K-3 CAP

State and locally funded Primary Class Size Reduction Program to establish maximum individual class size and pupil-teacher ratio in grades K -3rd for raising student achievement in high poverty schools.

M

## MEMBERSHIP

An official count of active students at a snapshot in time. Concurrently enrolled students at a second school are counted at their school of membership, not at their concurrent school. For CIP reporting purposes, September 30th certified membership numbers are used.

## MIGRATION

A term used to refer to students entering (inmigration) and leaving (out-migration) the school system.

## MODULAR ADDITIONS

Prefabricated buildings that are constructed off site in a factory and transported to school grounds to provide additional classroom space to accommodate students. They are portable, can be relocated, and typically are ready for use 30-60 percent faster than on-site built construction. Modulars sit on a permanent foundation. They have plumbing, interior corridors, and bathroom facilities. Modular additions are included in the calculation of school design and program capacity.

## NET MIGRATION

A term used to describe the total number of students gained or withdrawn from the school system once new students and the number of students who withdraw are added together. This CIP compares one school year to the previous year and identifies the difference of new students (excluding kindergarten students) to the number of students who did not return. (Excluding 12th grade students.)

## OPERATING BUDGET

This budget provides for the day-to-day operations and maintenance of the schools and is funded primarily by county and state funds. At times, operating funds are used to relieve overcrowding at school facilities through interior modifications and trailers to accommodate students.

## OVERCROWDED

Term is used synonymously with capacity deficit. (See CAPACITY DEFICIT)

## P

## PHASING OF ADJUSTMENTS

Carrying out changes to a school boundary in gradual stages, generally by a grade or set of grades at a time. FCPS School Board Policy 8130 titled "Local School Boundaries, Program Assignments, and School Closings" governs and provides the details the Phasing of Adjustments.

## PRESCHOOL AUTISM CLASSES (PAC)

Preschool Autism Class (PAC) services are designed with a reduced adult to student ratio and provide systematic instruction in a highly structured setting to maximize learning. PAC services are designed to address the specific needs of preschool-age children who have been identified as having Autism Spectrum Disorder or present characteristics on the autism spectrum, and who cannot benefit from the early childhood class based program.

## PROGRAM CAPACITY

Capacity based on the number of existing core classrooms and the specific unique programs assigned to a school that differs from the original design of the building. This capacity is recalculated every school year based on the program changes.

## PYRAMID

Pyramids are the group of schools located geographically within each high school boundary. At the top of each pyramid is one high school, followed by one or more middle schools, then elementary schools. Each school level of the pyramid generally feeds into the one above.

## REGION

Regions contain multiple pyramids that consist of high schools and their feeder schools. Regions also include alternative schools and centers. Regions provide necessary support for schools and the community within a geographic area. (See PYRAMID)

S

## SCHOOL AGE CHILD CARE (SACC)

Sponsored by Fairfax County government's Office for Children, SACC provides school-based day care facilities for elementary school children before and after school.

## SCHOOL BOARD POLICY 8130 LOCAL SCHOOL BOUNDARIES, PROGRAM ASSIGNMENTS, AND SCHOOL CLOSINGS

Provides guidance in the evaluation of proposed boundary adjustments.
The following examples of these factors are not presented in priority order. Any or all of these factors may be relevant in a particular consolidation, redistricting, or assignment plan:

- proximity of schools to student residences
- projected school membership and capacity
- walking distances
- busing times and costs
- walking and busing safety
- natural and man-made geographic features
- the impact on neighborhoods
- school feeder alignments
- contiguous school boundaries
- long-range capital plans
- socioeconomic characteristics of school populations
- distribution of programs and resources
- overall impact on families and students; and comparative long-term costs

Adjustments shall be made without respect to magisterial districts or postal addresses and, whenever possible, shall not affect the same occupied dwellings any more often than once in three years. The consideration of these factors and such adjustments shall involve affected communities to the extent reasonable. (See PHASING OF ADJUSTMENTS)

## SCHOOL YEAR (SY)

The school year consists of 180 days and is established by the School Board by Regulation 1344 Standard School Year Calendar.

## SPECIAL EDUCATION LEVEL 1 SERVICES

Level 1 services refer to the provision of special education and related services to children with disabilities for less than 50 percent of their instructional school day (excluding intermission for meals). The time that a child receives special education services is calculated on the basis of special education services described in the Individualized Education Program (IEP), rather than the location of services. The student membership projections and historical membership reports include these students in the grade level projections.

## SPECIAL EDUCATION LEVEL 2 SERVICES

Level 2 services refer to the provision of special education and related services to children with disabilities for 50 percent or more of the instructional school day (excluding intermission for meals). The time that a child receives special education services is calculated on the basis
of special education services described in the Individualized Education Program (IEP), rather than the location of services. The student membership projections and historical membership reports include these students in the column titled "Special Education."

## SPECIAL EDUCATION PROGRAMS

Specially designed instruction to meet the unique needs of a child with a disability. Special education services may include, but are not limited to preschool autism, autism, intellectual disabilities, deaf or hard of hearing, blind and visually impaired, or physical disabilities. A continuum of services is available at every school and comprehensive services are provided at selected sites.

## SPLIT FEEDER

A school from which students progress to more than one higher-level school. For example, an elementary school that sends students to two separate middle schools as part of the school's boundary.

## STUDENT YIELD RATIO

A ratio that is derived by dividing number of students by number of housing units (by type) in existing specified area. When used for the student enrollment projections, this ratio helps in determining the number of students expected to come from new housing. For example a housing development with 20 townhomes and five elementary school students would have a student yield ratio of 0.25 elementary school students per townhome.

## SUPPLEMENTAL (SPACE)

Locally mandated enrichment spaces such as: gymnasium, music, and art in elementary schools; these are considered electives in high and middle schools.

## SUPPORT (SPACE)

Spaces which offer support to the students during the day such as: cafeteria, toilets, locker rooms, and media center.

## TEMPORARY FACILITIES/CLASSROOMS (TRAILER CLASSROOMS)

Temporary buildings that are installed on the grounds of schools to provide additional classroom space. Trailers sit on permanent foundations but do not have plumbing utilities. Temporary classrooms are not included in the calculation of school design nor program capacity.

## TITLE I

Title $I$ is a federal grant. The purpose of this legislation is "to provide all children significant opportunities to receive a fair, equitable, and high-quality education, and to close educational achievement gaps." Title I elementary schools with the highest level of poverty receive funds that are used for staff and resources to meet the needs of their students and families. Schools are identified for Title I funds based on the percentage of students eligible for free or reduced-price meals.

## TRANSFER STUDENTS

Students who reside in one school's boundary and are assigned to that school (base school) but attend a school in a different boundary (attending school). This may occur for program access or for very specific reasons permitted by the Student Transfer Regulation 2230.

## TRANSITIONAL ESOL HIGH SCHOOLS

The Transitional ESOL High Schools (TEHS) provide instruction for older ESOL students (18 and up) who wish to earn their high school diploma. Students are in Grades 9-11, depending on their prior educational background. The TEHS provide instruction at eight sites, sharing space at Annandale High School, Bryant High School, Falls Church High School, Graham Road Center, Herndon High School, Lee High School, Pimmit Hills Center, and Justice High School.

[^0]:    Note: Based on September 30th certified membership for CIP purposes. Membership numbers include: general education, special education, AAP, FECEP/Head Start, preschool (wherever applicable), ESOL transitional high school, and special education centers. Membership numbers do not include: adult education, private school special education, home schooled, and multiagency. Dates for official budget counts are: special education and special education preschool (December 1); nontraditional sites (January 31); and FECEP/Head Start (March 31).

[^1]:    Schools with a capacity utilization percentage between $105 \%$ and $114 \%$ are considered to have a moderate capacity deficit．
