

Cecily

Did you know that a walrus can eat 4,000 clams
in one day?

Wow! That's too much for me!

Did you know that snowflakes are different because
their shape is made by the amount of water, wind, and
cold?

That's exciting!

Janice

Did you know that an Arctic fox can adapt and
live anywhere in the Arctic?

Wow! It's too cold for me!

Did you know that polar bears roll into balls to look
like snow when they hunt for seal?

That's amazing!

Robyn

Did you know the albatross wing span is 6 feet long?

That's really big!

Did you know a blue whale uses it's baleen teeth like
a strainer to let all the water out and trap it's food?

Give a smiley face for that!

Nick

Did you know that during mating season the narwhal
whales swim in a pod of 30,000 whales?

Wow! Too crowded for me!

Did you know the largest Emperor penguin found was 5 feet tall?

Yikes! That's 1 foot less than my dad!

Ashli

Did you know Inuits used to be called Eskimos?

How interesting!

Did you know that a daddy Emperor penguin holds the egg on his feet and won't eat or leave the crook until the egg hatches?

That can be for 2 months!

Wow! That's amazing!

Did you know the Earth is like a big magnet? The North and South Poles are the ends of the magnets. They attract things from the sun. It mixes with the air and makes the beautiful Northern and Southern lights.

That's cool!
