

## Exporting Student Work from Kidspiration and Inspiration:

Using Kidspiration 2.0, Select Publish icon. Your web and outline will be exported into Word. The text can be expanded in Word.

If you are using Kidspiration 1.0, you should Export from File> Export.

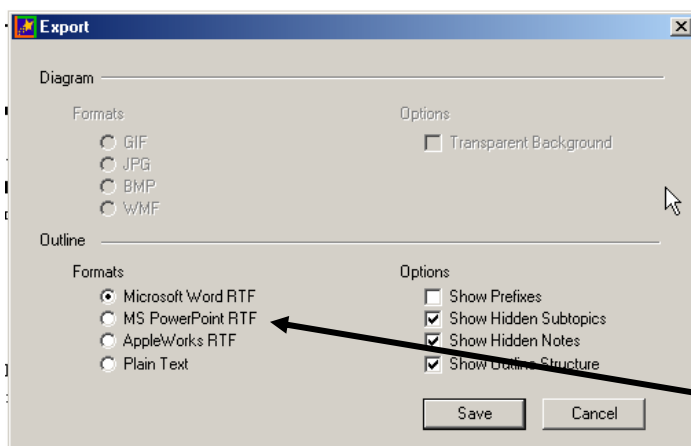

These are your web export options. Best choices are GIF or JPEG

These are your outline options. Select the program you want to use.

The initial outline saves as an .rtf file. You should change this to a .doc .

Inspiration 7.0 will export webs and outlines just as Kidspiration does.

You have the option of exporting to PowerPoint. (Change the rtf suffix to ppt) After you have saved the file as .rtf, open PowerPoint. Change the Files of Type window to see "All Files". In PowerPoint select File > Open and see your exported file. Each bubble or outline

category will import as a separate slide. This is very helpful to students learning to organize their notes and information.
