

Adding
Motion
using

FLASH

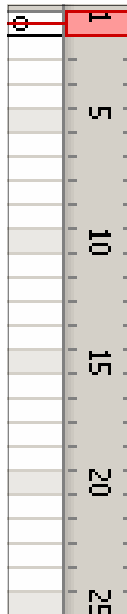

Adding motion in flash is so unbelievably easy.

-Select your drawing and right click it and select copy.

-Next, slightly change a part of the image. This is the key to adding motion in flash.

-Then go up to the frameboxes at the top of the screen. Right click and select "Insert Keyframe." You can also prolong a selected scene by highlighting multiple frames and right clicking and selecting "insert Keyframe."

Frame boxes

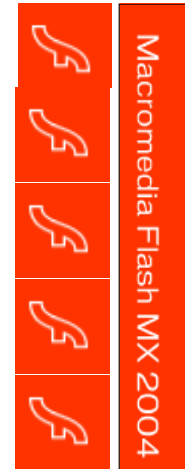

About Flash 5 MX

This program is designed to make short animated movies.

Flash expands your creativity as you can express anything you wish in animation format.

Flash is a program meant to be played around with, so feel free to explore!

Flash is so easy and simple you will be able to learn it in no time if you followed our few simple directions.

Getting Started

1. **Open Flash 5 MX located on the desktop.**

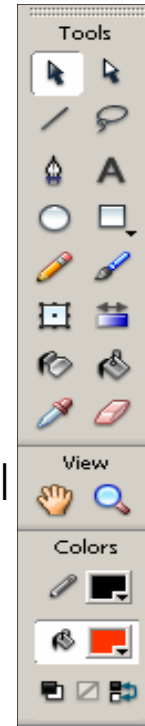

2. **Under the Create New menu, select Flash Document.**

Creating Simple Shapes And Figures

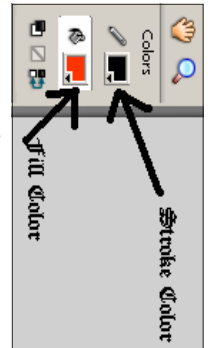

1. A) Use the drawing tool to create freehand drawing.
B) Use the line tool for straight lines.
C) Use the oval tool to create circles and ovals.
D) Use the rectangle tool to create squares and rectangles.
E) Click on the arrow in side the rectangle tool box to select the polystar tool to create pentagons.

Adding Color To An Object

1. A) **Select the paint bucket tool to fill large closed areas with color.**
B) **Select the brush tool to create thicker lines of color.**

2. **Select a color from either the fill color or stroke color.**

3. **Color the object.**

There are several different colors to choose from when you select the paint bucket. From the dull white to the exciting metallic colors, there is so much to choose from.
