

Effects/Animations

Make your photos more unique by adding animations to them!

Slideshow

You can upload two or more photos and they will automatically change one to one another in the specific amount time that you set.

Blend

This tool will allow you to put two pictures together in one frame. They will be merged together, with one picture on each side of the frame.

Zoom

A fun animation tool that adds life to your pictures is the Zoom.

Zoom in and out continuously, so that it seems like you are in the lens of a camera.

Publishing

Once you've designed your picture(s) the way you like them, you are now ready to share them with others.

Saving

Go to File >> Save Image and select the file type you want. This way, you can upload to other sites easily.

Printing

Go to File >> Print Image. This is better if your image doesn't have animations since animations will not be activated in a still format (like on a piece of paper).

After you have seen some of the ways LunaPic can be used to edit your photos, there are still so many more tools for you to try out. So, what are YOU waiting for?!

How to spice up your photos!

Introduction

Do you have a photo that is just too dark, unclear, or simply boring? If you're looking for a way to spice it up, why spend money on an expensive software when you can easily design your fix online?!

That is where the photo enhancement program, LunaPic, comes in.

What is LunaPic?

LunaPic.com is a free website for online photo editing. The site includes many features that allow you to make your photos look more unique. In this brochure, I will provide the basics for you to get started. Who knows? You might become a photo-design genius!

The Basics

When you first enter the site, you will probably not know where to start as there are many different tools to explore.

Instructions:

First, go to the website. Then, upload your photo by clicking on "Choose File" in the middle of the page. Open the image you want from your computer. Then, click "Upload."

There are several simple tools you can explore to enhance your photo after you have uploaded it.

Here are three:

Cropping - cut off a part of your picture

Resizing - changing your picture's size

Adding text - putting words to your picture

Adjusting/Coloring

Color is the most important design element in photos. With LunaPic, you can alter or enhance these colors. Some of the different ways you can make your picture look more artistic include—

Brightness

Make your photo brighter or darker to suit your liking.

Color Changer

Give your picture a different tone. This is usually used to put emphasis on the mood being shown in photos.

Saturation

Depending on how you adjust the saturation, your colors will either be dimmer or brighter by using the Saturation feature.

Sharpen

Is your picture too blurry? Make it clearer with the Saturation feature.
