

**Corner Curve** rounds the corners of the video clip

**Border** colors the edges of the clips

**Shadow** adds a black edge behind the clip

**Cropping** removes part of the face of the clip from any side or

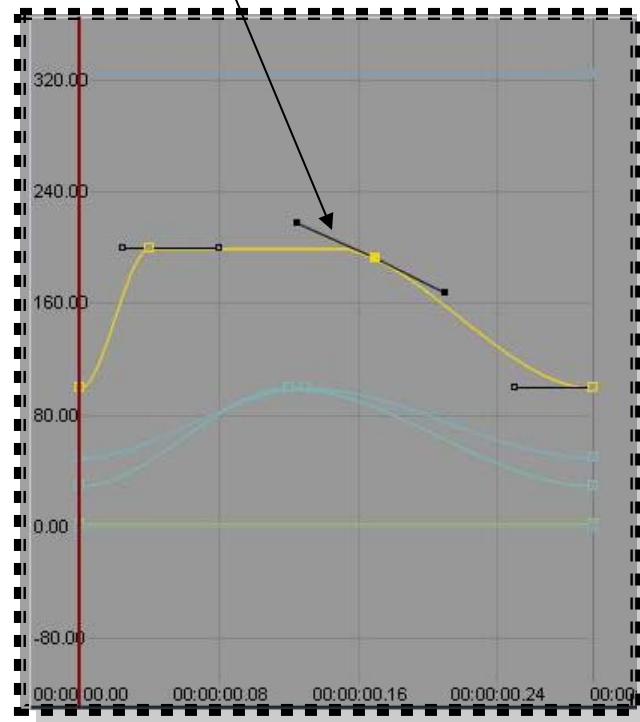

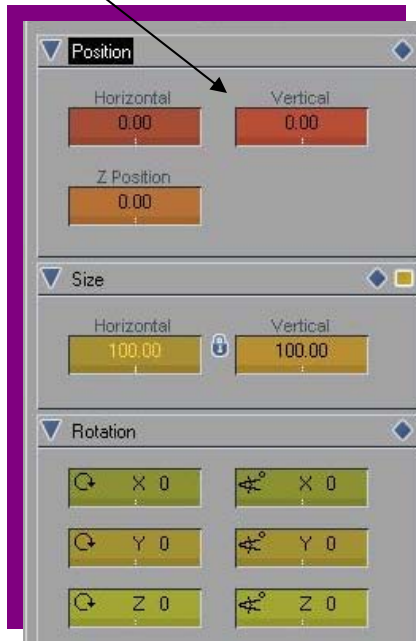

This section controls the rotation aspects of the 3-D effects.

# Avid Liquid Pro 2-D and 3-D Special Effects

Each line controls a different aspect of the 2-D and 3-D features. Move the line with the mouse and drag it across the screen, which will change the video clip based on what the line represents.

**When you select any of these operations, a box will pop up which will let you change the design.**

Welcome to our Avid Liquid Pro 2-D and 3-D tutorial! If you ever have the special privilege of editing videos on the Avid Liquid Pro system, you have many, many options to enhance your videos.

2-D and 3-D effects bring depth, dimension, intrigue, excitement, and creativity to video clips, and they really look spiffy. These effects can add the “wow” factor to your video!

*Some reasons why 2-D and 3-D effects add interest and are fun to use—*

1) When you add effects to your clips, you create a more rewarding product. For example, a clip of someone walking down the hallway could be made more exciting by adding a spin or border to it.

2) Visuals can be reemphasized in different ways. For example, change the size of the clip to zoom in on a face, if the camera did not do this originally.

3) Clips that transition in and out are more appealing. Take a regular clip, use the rotation tool, and set the transition for the next clip.

4) The attention of the audience can be yours! Effects make a regular image look unique. When you add an interesting border and spin to the images, the viewers will notice the look and detail and you'll hear them say “WOW!”

## What are 2-D and 3-D effects?

2-D effects include only length and width in the video clips.

3-D effects, however, allow clips to obtain depth and look more realistic and believable.

# H O W T O

perform  
the 2-D  
and 3-D  
operations

-First, open your video project in Avid Liquid Pro

-Click on the icon for the 2-D special effects

OR

-Click on the icon for the 3-D special effects.

-You can either click on the horizontal line that lies in the middle of the screen, or you can click on the box on the left and type in the desired numbers

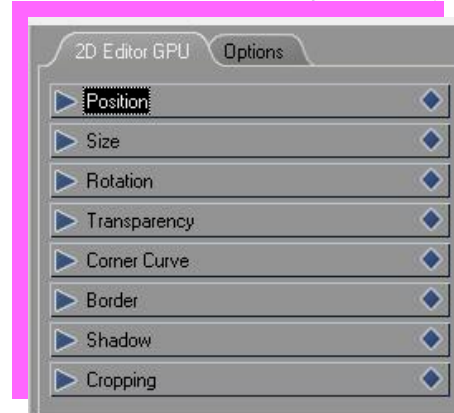

-To view the final effect, click the icon

# Effects

3-D

2-D

Here are a few of our favorite 2-D effects

Position moves the clip from side to side

Size zooms in or out of the clip

Rotation swivels the video clip in 2-D effects. The 3-D effects turns and flips the video clip in any direction

Transparency fades the clip in and out
