

Looking for a Great Math Resource?

Are you looking for a resource to support your child as they continue to improve in their math skills? Something that will support your child and also help you with explaining the “why” and “how” for various math concepts and skills?

Here is a suggestion that many parents have found to be very useful to them over the past few years— a handbook series that goes from kindergarten to 8th grade. It’s called A Mathematics Handbook. The series is published by Great Sources and includes editions for teachers, parents and students. Within each edition there are four handbooks that roughly equate to various grade levels.

The titles are:

Math on Call—grades 6-8; Math at Hand—grades 5-6;

Math to Know—grades 3-4; Math to Learn- grades K-2.

They can all be purchased from various online book retailers as well as most local book stores. If you would like to review one or more of these handbooks, please Stop by school and see Mr. Cook our Math Resource Teacher.
