Setting up Pulse Secure SSL VPN client on iOS (iPhone or iPad)

To connect to the SSL VPN on your iPhone or iPad, you must first download and install the Pulse Secure SSL VPN client from the iTunes Store. The Pulse Secure application needs to be downloaded and installed only one time. Once you have installed that application, configure it as follows.

Launch Pulse Secure and enter URL: `connect.fcps.edu` as seen below.

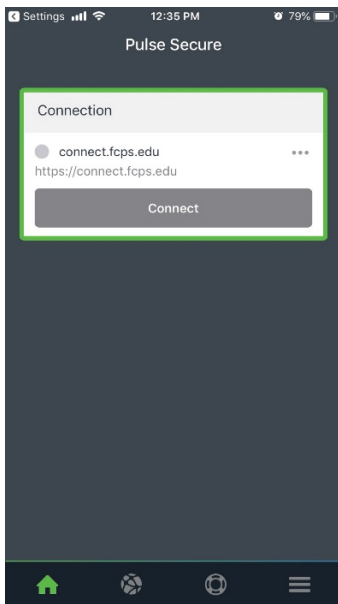

Add a Connection: Select Save and then Allow.

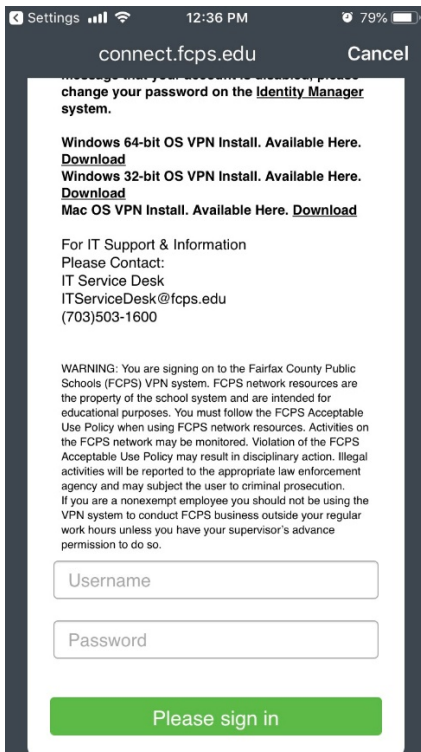

On the next screen you will need to allow this to be added to your phone via Touch ID or your PIN code that you set up on your device.

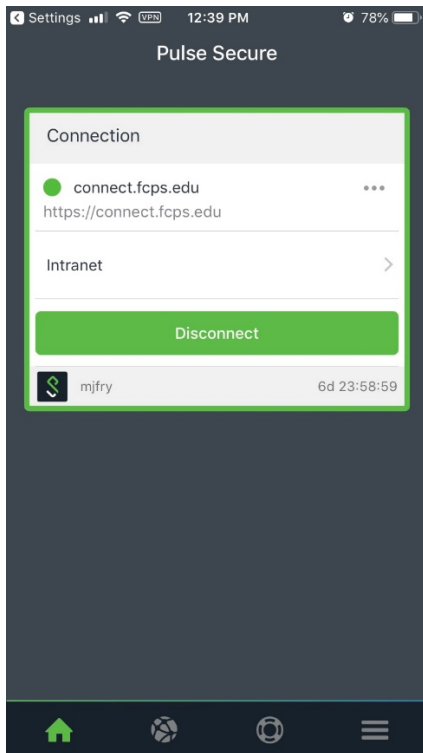

You are then presented with the Connection screen. Tap Connect.

Next screen is the Username and Password screen. Enter your information.

The screen below will show successful connection and display VPN at the very top of the screen.

Please contact the Service Desk at 703-503-1600 if you encounter any issues.
