- round/estimate
- subtraction
- time

## HOW TO USE Sheppard Number Games RESOURCES A GUIDING DOCUMENT FOR PARENTS

Then choose the Level of the specific activity you want to work on.

The screenshot shows the Sheppard Software website. At the top, it says "Sheppard Software" and "Hundreds of educational games and activities for kids and everyone to play online - and free!". Below this are several category icons: usa, world, animals, vocab, health, science, math, brain, preschool, and kids corner. The main content area features a "FRACTIONS SPLAT" game interface with the instruction "CLICK ON LEVEL BELOW TO PLAY". There are three main sections: "EQUAL AND UNEQUAL PARTS" (with sub-sections for EQUAL and UNEQUAL), "HALVES, THIRDS AND FOURTHS" (with sub-sections for HALVES, THIRDS, and FOURTHS), and "SIMPLE FRACTIONS". Each section contains visual representations of fractions like circles, squares, and triangles. A "SIMPLE FRACTIONS II" section is also visible on the right.

Then choose your mode for timing and speed.

The screenshot shows the "Choose your mode and speed" screen. It has a green background and two large white ovals. The left oval is labeled "Relaxed mode" and contains the text "10 questions, untimed. Try to get 100% correct!". Below this are two buttons: "FAST" (green) and "SLOW" (yellow). The right oval is labeled "Timed Mode" and contains the text "Answer as quickly and correctly as you can to increase your score.". Below this are also two buttons: "FAST" (green) and "SLOW" (yellow).

What to choose?

- Choose 1-2 activities per day. Choose those areas identified as being a need or interest for your child.
- The important thing to keep in mind is to make the activities fun. If your child becomes frustrated, or unable to continue - choose another activity or pick it back up at another time of day.
- Remember, with any screen time, please limit your student's time on this and any other recommended website.
